Education

Don Bosco Institute of Technology, Bengaluru
B.E. in Information Science and Engineering — *Expected June 2027*

RNS Pre-University College, Bengaluru
Pre-University Education – Computer Science — *2021–2023*

Professional Experience

BetonX — Bengaluru
AI / ML Project Contributor — *2026–Present*

- Contributing to an AI-driven concrete monitoring solution for real-time quality assessment and smarter decision-making on construction sites.
- Working with sensor readings, concrete temperature, and compressive-strength data to support machine learning-based strength prediction.
- Contributing to data preprocessing, regression modelling, and development of the monitoring dashboard.

Data Science / Analytics Projects — Bengaluru
Data Science Project Work — *2025–Present*

- Applied Python, Pandas, Scikit-learn, machine learning, exploratory data analysis, and data visualization across multiple data science projects.
- Developed regression, classification, and analytical workflows for structured datasets and real-world problems.

Projects

BetonX – AI-Powered Concrete Monitoring Platform — GitHub | Demo
Python, Pandas, Scikit-learn, Random Forest, Flask, Next.js

- Developed an AI-powered concrete monitoring platform to predict concrete strength using sensor data.
- Performed data preprocessing and regression modelling to analyze sensor measurements and concrete strength.
- Contributed to a web-based monitoring dashboard for presenting concrete monitoring information and model outputs.

Project Drishti – AI Event Safety Platform — GitHub | Demo
Python, Computer Vision, Vertex AI, Machine Learning

- Designed an AI-powered event-safety platform for analyzing crowd density, movement, and flow to support situational awareness.
- Designed predictive bottleneck analysis using video feeds to identify potential crowd congestion.
- Proposed AI-powered situational summaries and natural-language queries for event-safety monitoring.

Drug Discovery Assistant – MedTech AI Platform — GitHub | Demo
React, Flask, Python, RDKit, Vertex AI, Generative AI

- Developed a drug-discovery assistant combining molecular analysis, cheminformatics, and generative AI capabilities.
- Integrated RDKit for molecular structure processing and analysis within the application workflow.
- Connected a React interface with a Flask backend for molecular inputs and AI-generated insights.

Technical Strengths

Languages	Python, JavaScript/TypeScript, C, C++, Java, SQL
Core Subjects	Data Structures and Algorithms, DBMS, OOP, Operating Systems, Computer Networks
ML & AI	Pandas, NumPy, Scikit-learn, TensorFlow, PyTorch, Machine Learning, Computer Vision, Generative AI, RAG, LLMs
Frameworks	Flask, FastAPI, React, Next.js, Node.js, Express, Tailwind CSS
Infra & DevOps	Git, GitHub, Docker, CI/CD, AWS
Databases	MongoDB, PostgreSQL, SQL

Achievements

- IBM Data Science Professional Certificate.
- Applied Data Science Capstone – IBM.
- Generative AI: Elevate Your Data Science Career – IBM.
- Additional hackathon, ideathon, and project achievements can be added here.
